## COPA-DATA Partner Spotlight

Located in Bad Dürkheim, Tresch Automation serves utility and industrial customers across Germany. Its cooperation with COPA-DATA began in 2016 and, in 2021, it joined the COPA-DATA Partner Community.

### THE CHALLENGE

The expert engineering team at Tresch Automation had been searching for a suitable HMI/SCADA solution for a long time before it found zenon. It had found that the engineering effort using alternatives was often very extensive or repetitive.

The team wanted an easy to use and more efficient solution that could work equally well for a simple HMI display as for sprawling and complex control systems. When they saw zenon at the COPA-DATA offices in Ludwigshafen, they realized it was the solution they had been looking for. “We were attracted to zenon because COPA-DATA

offered very good references for projects that matched our customers’ focus very well,” explains Dominik Lott, CEO of Tresch Automation.

### THE SOLUTION

“We see zenon as a very future-oriented and open software platform,” continues Dominik Lott, “at the same time it is very secure.”

Tresch Automation is now delivering HMI and control systems based on zenon. As well as machine visualizations, it specializes in control systems for water supplies and

wastewater services, renewable energy generation and transformer stations, swimming pools and building management systems.

“Our customers are very impressed by the possibilities and flexibility that zenon offers. In particular, machine operators are always enthusiastic about the zenon World View,” reports Dominik Lott.

The Tresch Automation team has been impressed by the quality of support, especially the range of self-serve resources designed to build up their zenon knowledge.

“zenon is structured in such a way that we could be quick to familiarize ourselves with it,” adds Dominik Lott. “Usually, we can solve challenges well on our own but, when we do need to contact COPA-DATA support, they have helped us quickly and well.”

### THE PARTNERSHIP WITH COPA-DATA

The excellent support and partnership provided by the COPA-DATA team in Ludwigshafen has acted as an encouragement for Tresch Automation to join the COPA-DATA Partner Community.

Dominik Lott says, “We have not been a partner very long, but the bottom line is we have felt like a partner from day one of our cooperation with COPA-DATA because of the support and help they have given us in all matters.”

Tresch Automation is now looking forward to continued collaboration within the COPA-DATA Partner Community and mutually beneficial partnership as it grows the zenon user base in its areas of expertise.

*“We are happy to have chosen COPA-DATA. We have rarely come across comparable software in our industry that makes the implementation of projects so pleasant and comfortable.”*
